- ¿Qué es AutoML?
- Antecedentes
- Soluciones AutoML
- ¿Hacia dónde va AutoML?
- Recomendaciones

Antes de empezar...

Pintemos la cancha...

En esta charla trataremos de aportar algo al extenso material que ya está disponible sobre AutoML en Internet. Trataremos de cubrir puntos de los que no se ha hablado mucho.

Para saber más sobre la historia de AutoML y ver demos de las principales herramientas disponibles, revisar la sección de referencias y el repositorio de Github.

¿Qué es AutoML?

"Automated machine learning (AutoML) is the process of automating the process of applying machine learning to real-world problems. AutoML covers the complete pipeline from the raw dataset to the deployable machine learning model. AutoML was proposed as an artificial intelligence-based solution to the ever-growing challenge of applying machine learning".

Wikipedia

El proceso de automatizar la aplicación de modelos de Machine Learning para resolver problemas del mundo real.

¿Qué es AutoML?

¿Y por qué tendría que interesarme?

Google is funding "an artificial intelligence for data science"

Google is funding a project called Automatic Statistician that bills itself as "an artificial intelligence for data science," it announced Tuesday. The project, which comes out of the University of Cambridge and is still in its early stages, aims to automate the selection, building and explanation of machine learning models.

In a nutshell, Automatic Statistician works by looking at a dataset and then determining which type of model would be best for analyzing it as well as which features, or variables, are the strongest. After the model runs, Automatic Statistician will return a text report explaining its findings in plain English — or as close as you can get when dealing with statistics.

A snippet of an Automatic Statistician report on unemployment data

The project's homepage quotes Google research scientist Kevin Murphy, who also wrote the blog post announcing Google's funding for it, explaining the promise of Automatic Statistician like this:

[blockquote person="" attribution=""]The first problem is that current Machine Learning (ML) methods still require considerable human expertise in devising appropriate features and models. The second problem is that the output of current methods, while accurate, is often hard to understand, which makes it hard to trust. The "automatic statistician" project from Cambridge aims to address both problems, by using Bayesian model selection strategies to automatically choose good models / features, and to interpret the resulting fit in easy-to-understand ways, in terms of human readable, automatically generated reports,[/blockquote]

However, Automatic Statistician isn't the first attempt to deliver this type of service; there have, in fact, been multiple commercial attempts at doing similar things. The most accurate comparison might be to a now-defunct tool by machine learning startup Skytree called Skytree Adviser, which also automatically selected models and generated text reports of its findings. Startups including BeyondCore, Nutonian and even Ayasdi are all promising varying degrees of this functionality, as well.

As sexy as it is to talk about automating the data scientist job, though, it's a bit early to suggest any software will eliminate the need for such employees any time soon. Even if projects like Automatic Statistician or commercial tools can make it possible for relative laypersons to run machine learning models and uncover patterns, that's just a step or two down what's often a much-longer path of turning insights into real value or, possibly, products.

Data Scientists Automated and Unemployed by 2025?

Will Data Scientists be unemployed by 2025? Majority of voters in latest KDnuggets Poll expect expert-level Data Science to be automated in 10 years or less.

By Gregory Piatetsky, KDnuggets.

Data Scientist has been called the sexiest job of the 21st century. But perhaps the century will last only 25 years.

With even knowledge-based jobs like lawyers and accountants being automated, will Data Scientists prove to be an exception?

What predictive analytics professionals predict about the future of their profession?

Latest KDnuggets Poll asked:

When will most expert-level Predictive Analytics/Data Science tasks - currently done by human Data Scientists - be automated?

En realidad, todo iba muy bien...

Data scientists are in high demand

...Hasta que cierta Pandemia empezó...

Why the year 2020 will prove to be a headache for Data Scientists

The effects of coronavirus will ripple through data science projects

Photo by Aaron: Unsplash

"Your model is as good as your data" is the most basic postulation in data science. Good data equals a good model! The coronavirus has impacted millions of lives around the globe, wreaked havoc on the airline industry and shattered equity markets globally.

The Recession's Impact on Analytics and Data Science

There has been a huge demand for data scientists in the past decade. Is that about to change?

Jeffrey D. Camm, Melissa R. Bowers, and Thomas H. Davenport June 16, 2020
READING TIME: 7 MIN

The outbreak of the COVID-19 pandemic is having a dramatic negative impact on economies in the U.S. and worldwide, and unemployment rates are soaring. Given the economic disruptions, it seems likely that many countries in the global economy will experience a recession.

Data Science, Quarantined

Companies are beginning to reboot their machine learning and analytics, which have been disrupted by the global pandemic.

The economic impact of COVID-19 is unprecedented, dramatically changing markets and prospects for economic growth. Supply chains, transportation, food processing, retail, e-commerce, and many other industries have transformed overnight. Unemployment in the U.S. has reached levels unknown in recent memory, and GDP is expected to fall around the world. As one economic journalist summed-up the situation: "Nearly everything in the world is superweird and disrupted right now."

Pero ya veníamos de una realidad complicada...

Our Top Data and Analytics Predicts for 2019

by Andrew White | January 3, 2019 | Comments Off on Our Top Data and Analytics Predicts for 2019

Predicts 2019: Data and Analytics Strategy

- By 2022, 90% of corporate strategies will explicitly mention information as a critical enterprise asset and analytics as an essential competency.
- By 2023, data literacy will become an explicit and necessary driver of business value, demonstrated by its formal inclusion in over 80% of data and analytics strategies and change management programs.
- By 2022, 30% of CDOs will partner with their CFO to formally value the organization's information assets for improved information management and benefits.
- By 2023, 60% of organizations with more than 20 data scientists will require a professional code of conduct incorporating ethical use of data and Al.
- By 2022, more than half of major new business systems will incorporate continuous intelligence that uses real-time context data to improve decisions.

Predicts 2019: Analytics and BI Solutions

- Through 2020, 80% of Al projects will remain alchemy, run by wizards whose talents will not scale in the organization.
- Through 2022, only 20% of analytic insights will deliver business outcomes.
- By 2021, proof-of-concept analytic projects using quantum computing infrastructure will have outperformed traditional analytic approaches in multiple domains by at least a factor of 10

Hasta 2020, el 80% de los proyectos de IA seguirán siendo alquimia, a cargo de magos, cuyos talentos no escalarán en la organización.

Hasta 2022, solo el 20% de los insights analíticos generarán resultados comerciales.

tabnine 🔘

Kite VS. TabNine: Which AI Code Autocomplete Should You Choose?

I tested two of the hottest AI code assistant in 2021

¿Y la deuda técnica?

Hidden Technical Debt in Machine Learning Systems

D. Sculley, Gary Holt, Daniel Golovin, Eugene Davydov, Todd Phillips {dsculley, gholt, dgg, edavydov, toddphillips}@google.com Google, Inc.

En Resumen:

Demanda Insatisfecha Proyectos Analíticos Fracasando

Herramientas incorporando +Capacidades

AutoML para todos

¿Y cuál es la mayor amenaza que trae AutoML?

Que los financieros se preocupen por precio y no por el valor

Es necesario evidenciar todo lo que se necesita

Sobre todo que no se trata sólo de reducir el headcount

→ COMPARTIR = GUARDAR ...

Recomendaciones

Recomendaciones

Gente que está adoptando AutoML:

- Revisar las necesidades
- Evaluar diferentes alternativas
- Priorizar capacidades requeridas
- Hacer experimentos (muchos!)
- Trabajar con distintos escenarios
- Generar conciencia de las limitaciones tecnológicas

A Futuro:

- Ser parte del cambio
- Buscar aumentar las capacidades, no reemplazar personas
- Nunca dejar de aprender y desaprender
- Reforzar las capacidades que difícilmente pueden ser automatizadas

¿Obsoletos?

Para recordar:

1

Las soluciones AutoML
seguirán evolucionando
e incorporando más
capacidades. Hay muchas
oportunidades claras,
construyendo el futuro.

2

Las partes del proceso menos automatizables son también las menos técnicas.

3

Renovarse continuamente o Desaparecer.
